

Hi Conor,

GNI proposing to change 2nd tier imbalances from 0.95/1.05 to 0.75/1.25 of SAP. We feel the proposed level of increase is unjustified – as per the presentation, there are a small number of Shippers exceeding the Tier 1 imbalances. Can these Shippers be dealt with individually as we feel the proposed increase is too stark. We suggest a rule similar to NDM rule could apply - If last nom is entered @ 23:00 or deemed time, you can only find yourself in Tier 1 as any differential to that is Eirgrid's fault and not powergens as EirGrid are deviating from the planned running.

Kind regards,
Karol
