

See below IOOA response to Gas Balancing Workshop Meeting Actions 1 June 2016

Change of 2<sup>nd</sup> Tier Multipliers - IOOA's members disagree with the proposed changes to the second tier multipliers. As stated in previous correspondence IOOA's members consider the removal of all tolerances and one cash out price as outlined in our presentation in the first balancing workshop to be appropriate with the price being set by the balancing / trading platform with SAP being the fall back should no trades occur on the balancing / trading platform.

Balancing Platform – A form of balancing platform should be introduced to the Irish market, however, IOOA's members are surprised that the trading platform being developed by EBI is not being considered.

Best Regards,

Brian McGlinchey
